

### Brief information about the project

Name of the project	ИПН AP19175423 «Socio-psychological aspects of religious destructivism manifestations»
Relevance	The fact is that the presented study is one of the first works that reveals the socio-psychological factors in the manifestation of the phenomenon of religious destructiveness. A contribution to the study of this phenomenon is the awareness of the importance and new understanding of religious destructiveness in comparison with currently available approaches. The prerequisites for the development of the project are a comprehensive and multi-level study of religious destructiveness, characterization of typological models of destructiveness, analysis of the structural and functional features of the psychological aspects of the manifestation of religious destructiveness, identification of the main trends and features of the development of the phenomenon of religious destructiveness, as well as the risks associated with it.
Purpose	a comprehensive study of the social and psychological aspects of the manifestation of religious destructiveness, identifying the place and role of religious destructiveness, studying issues of religious consciousness and manipulation through religion in general.
Objectives	<ul style="list-style-type: none"><li>- conduct a theoretical analysis of religious destructiveness, the specifics of manipulative technologies of the activities of destructive religious movements based on scientific sources of foreign and domestic research, their influence on the formation of religious consciousness and determination of vectors of development of modern religiosity through the prism of studying psychological and social aspects in the context of changes and transformations of the spiritual sphere of modern Kazakhstan; as a result of this search - to reveal the concepts of “religious destructive” and “religious consciousness” and determine the presence and boundaries of the fields of interface between them, which will legitimize the study of the problem in this formulation, determine the criteria for the requirements for correlation with the activities of destructive non-traditional religious movements in Kazakhstan;</li><li>- determine the categories of religious destructive for introduction into scientific circulation, and for the further development of programs for interdisciplinary research; identify the features of destructiveness in the situation of the spread of destructive non-traditional religious movements, analyze the possible risks of exposure of religious consciousness to the influence of destructiveness.</li><li>- to establish the most important elements of the social and psychological aspects of the manifestation of religious destructiveness, methods and forms of manipulative techniques of destructiveness, which carry the potential to</li></ul>

	influence those areas of society that directly affect the national interests of the country and the formation of religious views of young people, among whom there is a high level of religiosity, in features recently.
Expected and achieved results	The scientific conclusions obtained, and the conceptual reconstruction carried out in the study of the features of the functions of religion, religious destructivism, psychology of religion, etc. based on materials from Kazakh and foreign scientists will serve as a theoretical basis for research in the sociology and psychology of religion. The socially significant and economic effect of the work is that the presented results can be applied in scientific and educational work in a comprehensive study of the information and communication activities of destructive religious organizations. The expected results of the study can be used by researchers, teachers of universities and colleges, law enforcement officers, the National Security Committee, the Committee on Religious Affairs when forming or adjusting information policy and information and communication activities.
